PROFESSIONAL SUMMARY

Mobile Developer with 3+ years building production Flutter and native Android apps (1,000–5,000+ active users, 4.5+ star ratings). Experienced across the full app lifecycle: Clean Architecture with Provider/Bloc/Cubit state management, REST API integration, Firebase backends, push notifications (FCM), crash reporting (Crashlytics), deep links, and GPS/background services. Native Android background gives added depth in real-time messaging (Sendbird), background task orchestration (WorkManager), and performance tuning. Comfortable owning a feature end-to-end and coordinating with backend and design teams. Native Arabic speaker with direct experience building for the Egypt/MENA market, including RTL-aware UI.

CORE SKILLS FOR THIS ROLE

Flutter & Architecture: Dart, Provider, Bloc, Cubit, layered/Repository architecture, clean state separation

APIs & Data: REST APIs, Authentication, Firebase/Firestore, Hive, local caching & offline-first patterns

Notifications & Reliability: Push Notifications (FCM), Crash Reporting & Analytics (Crashlytics), background tasks (WorkManager)

Real-time & Media: Real-time messaging integration (Sendbird — delivery/read status, live updates), deep links

UI Implementation: Figma-to-code — pixel-accurate, responsive UI implementation from design handoff

Localization: RTL & Arabic UI (native speaker, MENA-market apps)

Release & Tooling: Git, CI/CD (Coolify), Jira, ClickUp, App Store/Play Store release process, Agile/Scrum

Team & Mentorship: Code review, task scoping/assignment for junior developers, cross-team coordination

RELEVANT EXPERIENCE

Software Engineer — Inventors Incubators, Alexandria, Egypt

03/2026 – Present

- Build mobile apps in React Native, applying the same declarative-UI and state-management discipline used in Flutter, cutting development time by 40%
- Build backend REST APIs with Node.js supporting 10,000+ daily users at 99.9% uptime, giving direct experience on the API contracts a mobile app depends on
- Manage CI/CD pipelines using Coolify for automated builds and deployments
- Review code from junior developers and assign/scope their tasks, coordinating via ClickUp and working directly with design/backend counterparts
- Use AI coding tools (Claude Code) to accelerate development and code review, improving delivery speed

Flutter Developer — ItSpark, Alexandria, Egypt

09/2023 – 09/2024

- Built and shipped Flutter apps on Firebase, reaching 1,000+ active users
- Implemented pixel-accurate, responsive UI from Figma designs across app screens
- Applied Provider, Bloc, and Cubit for state management, restructuring screen-level state and rebuild scope to cut load time by 30%
- Designed and built a full healthcare appointment booking platform (psychologists/clinics) end-to-end — search, scheduling, real-time slot availability, and booking confirmation flows

Software Engineer (Android) — Enozom, Alexandria, Egypt

06/2022 – 06/2023

- Built native Android apps in Kotlin, reaching a 4.5+ star rating with 5,000+ downloads
- Implemented pixel-accurate UI from Figma designs across app screens
- Worked on Empolis (Android knowledge-management app), integrating Sendbird for real-time messaging — live delivery/read status, notifications, and link previews — the same real-time patterns (streams/sockets) this role's WebSocket requirements call for
- Handled Play Store release process for Empolis, including build preparation and store submission requirements
- Tracked and coordinated tasks via Jira as part of the Android team's workflow
- Implemented push notifications and optimized background task management with WorkManager, improving battery efficiency by 25%

FREELANCE PROJECTS

Freelance Flutter Developer — Confidential Client

09/2024 – 04/2025

- Built a Flutter drawing app with local data persistence using Provider for state management, SQLite (sqflite) and Hive for local storage
- Applied geometric computing for canvas drawing logic — shape rendering, path/coordinate calculations, and transformations
- Implemented screenshot prevention to protect user-created content and app data
- Built and integrated a media player feature for in-app playback alongside the drawing/canvas features
- Implemented app localization supporting Arabic and English (RTL/LTR)

SHIPPED & LIVE PROJECTS

Psychology Booking App (*Flutter, Firebase*) — Confidential client

- Vezeeta-style appointment booking app built solo, end-to-end: doctor search, scheduling, and live booking updates via Firebase real-time listeners

Geofencing HR App (*Flutter, Next.js, React*) — Complete and ready to launch; currently in sale negotiations

- Built the Flutter employee app with GPS-based geofencing that auto-triggers clock-in/clock-out on zone entry/exit, backed by a Next.js API and React admin dashboard

MLS Real Estate App (*React Native*) — In active development at Inventors Incubators

- Property listings and client management app with in-app payment flows via deep links, handing off to external payment providers and handling return transaction results

EDUCATION

Bachelor's Degree, Computer and Communication Engineering — Alexandria University

Graduation Project: Medication Detection App (Flutter) — Grade: A

LANGUAGES

Arabic: Native Speaker | English: Proficient
